# About This Document

This document is Volume 5 of the *OCTAVE-S Implementation Guide*, a 10-volume handbook supporting the OCTAVE-S methodology. This volume provides worksheets to document data related to critical assets that are categorized as information.

The volumes in this handbook are

- *Volume 1: Introduction to OCTAVE-S* – This volume provides a basic description of OCTAVE-S and advice on how to use the guide.
- *Volume 2: Preparation Guidelines* – This volume contains background and guidance for preparing to conduct an OCTAVE-S evaluation.
- *Volume 3: Method Guidelines* – This volume includes detailed guidance for each OCTAVE-S activity.
- *Volume 4: Organizational Information Workbook* – This volume provides worksheets for all organizational-level information gathered and analyzed during OCTAVE-S.
- *Volume 5: Critical Asset Workbook for Information* – This volume provides worksheets to document data related to critical assets that are categorized as information.
- *Volume 6: Critical Asset Workbook for Systems* – This volume provides worksheets to document data related to critical assets that are categorized as systems.
- *Volume 7: Critical Asset Workbook for Applications* – This volume provides worksheets to document data related to critical assets that are categorized as applications.
- *Volume 8: Critical Asset Workbook for People* – This volume provides worksheets to document data related to critical assets that are categorized as people.
- *Volume 9: Strategy and Plan Workbook* – This volume provides worksheets to record the current and desired protection strategy and the risk mitigation plans.
- *Volume 10: Example Scenario* – This volume includes a detailed scenario illustrating a completed set of worksheets.

## Abstract

The Operationally Critical Threat, Asset, and Vulnerability Evaluation<sup>SM</sup> (OCTAVE<sup>®</sup>) approach defines a risk-based strategic assessment and planning technique for security. OCTAVE is a self-directed approach, meaning that people from an organization assume responsibility for setting the organization's security strategy. OCTAVE-S is a variation of the approach tailored to the limited means and unique constraints typically found in small organizations (less than 100 people). OCTAVE-S is led by a small, interdisciplinary team (three to five people) of an organization's personnel who gather and analyze information, producing a protection strategy and mitigation plans based on the organization's unique operational security risks. To conduct OCTAVE-S effectively, the team must have broad knowledge of the organization's business and security processes, so it will be able to conduct all activities by itself.

# 1 Introduction

This document contains the Operationally Critical Threat, Asset, and Vulnerability Evaluation<sup>SM</sup> (OCTAVE<sup>®</sup>)-S worksheets related to critical assets that are information. The activities related to these worksheets are focused on analyzing a critical asset.

Table 1 provides a brief introduction to the contents of this workbook, using step numbers as a key. For more details about how to complete each step, refer to the *OCTAVE<sup>®</sup>-S Method Guidelines*, which can be found in Volume 3 of the *OCTAVE<sup>®</sup>-S Implementation Guide*.

**Table 1: Worksheets Provided in This Workbook**

Step	Description	Worksheet	Activity	Pages
Step 6	Start a <i>Critical Asset Information worksheet</i> for each critical asset. Record the name of the critical asset on its <i>Critical Asset Information worksheet</i> .	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8
Step 7	Record your rationale for selecting each critical asset on that asset's <i>Critical Asset Information worksheet</i> .	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8
Step 8	Record a description for each critical asset on that asset's <i>Critical Asset Selection worksheet</i> . Consider who uses each critical asset as well as who is responsible for it.	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8
Step 9	Record assets that are related to each critical asset on that asset's <i>Critical Asset Information worksheet</i> . Refer to the <i>Asset Identification worksheet</i> to determine which assets are related to each critical asset.	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8

<sup>®</sup> OCTAVE is registered in the United States Patent and Trademark Office by Carnegie Mellon University.

**Table 1: Worksheets Provided in This Workbook (cont.)**

Step	Description	Worksheet	Activity	Pages
Step 10	Record the security requirements for each critical asset on that asset's <i>Critical Asset Information worksheet</i> .	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8
Step 11	For each critical asset, record the most important security requirement on that asset's <i>Critical Asset Information worksheet</i> .	Critical Asset Information	Phase 1 Process S2 S2.1 Select Critical Assets	5-8
Step 12	Complete all appropriate threat trees for each critical asset. Mark each branch of each tree for which there is a non-negligible possibility of a threat to the asset.  If you have difficulty interpreting a threat on any threat tree, review the description and examples of that threat in the <i>Threat Translation Guide</i> .	Risk Profile  Threat Translation Guide	Phase 1 Process S2 S2.1 Identify Threats to Critical Assets	9-54
Step 13	Record specific examples of threat actors on the <i>Risk Profile worksheet</i> for each applicable actor-motive combination.	Risk Profile	Phase 1 Process S2 S2.1 Identify Threats to Critical Assets	9-54
Step 14	Record the strength of the motive for deliberate threats due to human actors. Also record how confident you are in your estimate of the strength of the actor's motive.	Risk Profile	Phase 1 Process S2 S2.1 Identify Threats to Critical Assets	9-54
Step 15	Record how often each threat has occurred in the past. Also record how accurate you believe your data are.	Risk Profile	Phase 1 Process S2 S2.1 Identify Threats to Critical Assets	9-54
Step 16	Record areas of concern for each source of threat where appropriate. An area of concern is a scenario defining how specific threats could affect the critical asset.	Risk Profile	Phase 1 Process S2 S2.1 Identify Threats to Critical Assets	9-54

**Table 1: Worksheets Provided in This Workbook (cont.)**

Step	Description	Worksheet	Activity	Pages
Step 17	Select the system of interest for each critical asset (i.e., the system most closely related to the critical asset).	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58
Step 18a	Review paths used to access each critical asset, and select key classes of components related to each critical asset.  Determine which classes of components are part of the system of interest.	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58
Step 18b	Determine which classes of components serve as intermediate access points (i.e., which components are used to transmit information and applications from the system of interest to people).	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58
Step 18c	Determine which classes of components, both internal and external to the organization's networks, are used by people (e.g., users, attackers) to access the system.	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58
Step 18d	Determine where information from the system of interest is stored for backup purposes.	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58
Step 18e	Determine which other systems access information or applications from the system of interest and which other classes of components can be used to access critical information or services from the system of interest.	Network Access Paths	Phase 2 Process S3 S3.1 Examine Access Paths	55-58

**Table 1: Worksheets Provided in This Workbook (cont.)**

Step	Description	Worksheet	Activity	Pages
Step 22	Using the impact evaluation criteria as a guide, assign an impact value (high, medium, or low) for each active threat to each critical asset.	Risk Profile Impact Evaluation Criteria	Phase 3 Process S4 S4.1 Evaluate Impacts of Threats	9-54
Step 24	Using the probability evaluation criteria as a guide, assign a probability value (high, medium, or low) for each active threat to each critical asset. Document your confidence level in your probability estimate.	Risk Profile Probability Evaluation Criteria	Phase 3 Process S4 S4.3 Evaluate Probabilities of Threats	9-54
Step 26	Transfer the stoplight status for each security practice area from the <i>Security Practices worksheet</i> to the “Security Practice Areas” section (Step 26) of each critical asset’s <i>Risk Profile worksheet</i> .	Risk Profile Security Practices	Phase 3 Process S5 S5.2 Select Mitigation Approaches	9-54
Step 27	Select a mitigation approach (mitigate, defer, accept) for each active risk.  For each risk that you decided to mitigate, circle one or more security practice areas for which you intend to implement mitigation activities.	Risk Profile	Phase 3 Process S5 S5.2 Select Mitigation Approaches	9-54

## 2 Critical Asset Information Worksheet for Information

Phase 1  
Process S2  
Activity S2.1

**Step 6**

Start a *Critical Asset Information worksheet* for each critical asset. Record the name of the critical asset on its *Critical Asset Information worksheet*.

**Step 7**

Record your rationale for selecting each critical asset on that asset's *Critical Asset Information worksheet*.

**Step 8**

Record a description for each critical asset on that asset's *Critical Asset Selection worksheet*. Consider who uses each critical asset as well as who is responsible for it.

**Step 9**

Record assets that are related to each critical asset on that asset's *Critical Asset Information worksheet*. Refer to the *Asset Identification worksheet* to determine which assets are related to each critical asset.

Phase 1  
Process S2  
Activity S2.2

**Step 10**

Record the security requirements for each critical asset on that asset's *Critical Asset Information worksheet*.

**Step 11**

For each critical asset, record the most important security requirement on that asset's *Critical Asset Information worksheet*.

Step 6	Step 7
Critical Asset	Rationale for Selection
<i>What is the critical information?</i>	<i>Why is this information critical to the organization?</i>

Step 9

Related Assets	
<i>Which assets are related to this information?</i>	
Systems:	Applications:
Other:	

## Critical Asset Information Worksheet

### Step 8

#### Description

*Who uses the information?*

*Who is responsible for the information?*

### Step 10

#### Security Requirements

*What are the security requirements for this information?*

*(Hint: Focus on what the security requirements should be for this information, not what they currently are.)*

Confidentiality      Only authorized personnel can view  
 \_\_\_\_\_

Integrity      Only authorized personnel can modify  
 \_\_\_\_\_

Availability      \_\_\_\_\_ must be available for personnel to perform their jobs.

Unavailability cannot exceed \_\_\_\_\_ hour(s) per every \_\_\_\_\_ hours.

Other  
 \_\_\_\_\_  
 \_\_\_\_\_

### Step 11

#### Most Important Security Requirement

*Which security requirement is most important for this information?*

Confidentiality

Integrity

Availability

Other

### 3 Risk Profile Worksheet for Information – Human Actors Using Network Access

Phase 1  
Process S2  
Activity S2.3

<b>Step 12</b>	Complete the threat tree for <i>human actors using network access</i> . Mark each branch of each tree for which there is a non-negligible possibility of a threat to the asset.  If you have difficulty interpreting a threat on the threat tree, review the description and examples of that threat in the <i>Threat Translation Guide</i> (see pp. 60-63 of this workbook).
<b>Step 13</b>	Record specific examples of threat actors on the <i>Risk Profile worksheet</i> for each applicable actor-motive combination.
<b>Step 14</b>	Record the strength of the motive for deliberate threats due to human actors. Also record how confident you are in your estimate of the strength of the actor's motive.
<b>Step 15</b>	Record how often each threat has occurred in the past. Also record how accurate you believe your data are.
<b>Step 16</b>	Record areas of concern for each source of threat where appropriate. An area of concern is a scenario defining how specific threats could affect the critical asset.

continued

Phase 3  
Process S4  
Activity S4.1

**Step 22**

Using the impact evaluation criteria as a guide, assign an impact value (high, medium, or low) to each active threat.

Phase 3  
Process S4  
Activity S4.3

**Step 24**

Using the probability evaluation criteria as a guide, assign a probability value (high, medium, or low) to each active threat. Document your confidence level in your probability estimate.

Phase 3  
Process S5  
Activity S5.2

**Step 26**

Transfer the stoplight status for each security practice area from the *Security Practices worksheet* to the “Security Practice Areas” section (Step 26) of the following worksheet.

**Step 27**

Select a mitigation approach (mitigate, defer, accept) for each active risk.

For each risk that you decided to mitigate, circle one or more security practice areas for which you intend to implement mitigation activities.

Step 16

Human Actors Using Network Access		Areas of Concern
<p><b>Insiders Using Network Access</b></p> <p>Give examples of how <i>insiders acting accidentally</i> could use network access to threaten this information.</p>		
<p>Give examples of how <i>insiders acting deliberately</i> could use network access to threaten this information.</p>		
<p><b>Outsiders Using Network Access</b></p> <p>Give examples of how <i>outsiders acting accidentally</i> could use network access to threaten this information.</p>		
<p>Give examples of how <i>outsiders acting deliberately</i> could use network access to threaten this information.</p>		

## Risk Profile Worksheet for Information: Network Access

### Areas of Concern

Insiders Using Network Access
Outsiders Using Network Access

## 4 Risk Profile Worksheet for Information – Human Actors Using Physical Access

Phase 1  
Process S2  
Activity S2.3

<b>Step 12</b>	Complete the threat tree for <i>human actors using physical access</i> . Mark each branch of each tree for which there is a non-negligible possibility of a threat to the asset.  If you have difficulty interpreting a threat on the threat tree, review the description and examples of that threat in the <i>Threat Translation Guide</i> (see pp. 64-67 of this workbook).
<b>Step 13</b>	Record specific examples of threat actors on the <i>Risk Profile worksheet</i> for each applicable actor-motive combination.
<b>Step 14</b>	Record the strength of the motive for deliberate threats due to human actors. Also record how confident you are in your estimate of the strength of the actor's motive.
<b>Step 15</b>	Record how often each threat has occurred in the past. Also record how accurate you believe your data are.
<b>Step 16</b>	Record areas of concern for each source of threat where appropriate. An area of concern is a scenario defining how specific threats could affect the critical asset.

continued

Phase 3  
Process S4  
Activity S4.1

**Step 22** Using the impact evaluation criteria as a guide, assign an impact value (high, medium, or low) to each active threat.

Phase 3  
Process S4  
Activity S4.3

**Step 24** Using the probability evaluation criteria as a guide, assign a probability value (high, medium, or low) to each active threat. Document your confidence level in your probability estimate.

Phase 3  
Process S5  
Activity S5.2

**Step 26** Transfer the stoplight status for each security practice area from the *Security Practices worksheet* to the "Security Practice Areas" section (Step 26) of the following worksheet.

**Step 27** Select a mitigation approach (mitigate, defer, accept) for each active risk.  
For each risk that you decided to mitigate, circle one or more security practice areas for which you intend to implement mitigation activities.

Human Actors Using Physical Access					Basic Risk Profile						
Step 12			Step 22								
Threat					Impact Values						
<p>For which branches is there a non-negligible possibility of a threat to the asset? Mark these branches on the tree.</p> <p>For which of the remaining branches is there a negligible possibility or no possibility of a threat to the asset? Do not mark these branches.</p>					<p>What is the potential impact on the organization in each applicable area?</p>						
Asset	Access	Actor	Motive	Outcome	Reputation	Financial	Productivity	Fines	Safety	Other	
physical	inside	accidental	disclosure								
			modification								
			loss, destruction								
			interruption								
	deliberate	disclosure									
		modification									
		loss, destruction									
		interruption									
outside	accidental	disclosure									
		modification									
		loss, destruction									
		interruption									
	deliberate	disclosure									
		modification									
		loss, destruction									
		interruption

## Risk Profile Worksheet for Information: Physical Access

### Areas of Concern

<b>Insiders Using Physical Access</b>
<b>Outsiders Using Physical Access</b>

## 5 Risk Profile Worksheet for Information – System Problems

Phase 1  
Process S2  
Activity S2.3

**Step 12**

Complete the threat tree for *system problems*. Mark each branch of each tree for which there is a non-negligible possibility of a threat to the asset.

If you have difficulty interpreting a threat on the threat tree, review the description and examples of that threat in the *Threat Translation Guide* (see pp. 68-71 of this workbook).

**Step 15**

Record how often each threat has occurred in the past. Also record how accurate you believe your data are.

**Step 16**

Record areas of concern for each source of threat where appropriate. An area of concern is a scenario defining how specific threats could affect the critical asset.

continued

Phase 3  
Process S4  
Activity S4.1

**Step 22**

Using the impact evaluation criteria as a guide, assign an impact value (high, medium, or low) to each active threat.

Phase 3  
Process S4  
Activity S4.3

**Step 24**

Using the probability evaluation criteria as a guide, assign a probability value (high, medium, or low) to each active threat. Document your confidence level in your probability estimate.

Phase 3  
Process S5  
Activity S5.2

**Step 26**

Transfer the stoplight status for each security practice area from the *Security Practices worksheet* to the “Security Practice Areas” section (Step 26) of the following worksheet.

**Step 27**

Select a mitigation approach (mitigate, defer, accept) for each active risk.

For each risk that you decided to mitigate, circle one or more security practice areas for which you intend to implement mitigation activities.

## 6 Risk Profile Worksheet for Information – Other Problems

Phase I  
Process S2  
Activity S2.3

**Step 12**

Complete the threat tree for *other problems*. Mark each branch of each tree for which there is a non-negligible possibility of a threat to the asset.

If you have difficulty interpreting a threat on the threat tree, review the description and examples of that threat in the *Threat Translation Guide* (see pp. 72-77 of this workbook).

**Step 15**

Record how often each threat has occurred in the past. Also record how accurate you believe your data are.

**Step 16**

Record areas of concern for each source of threat where appropriate. An area of concern is a scenario defining how specific threats could affect the critical asset.

continued

Phase 3  
Process S4  
Activity S4.1

**Step 22** Using the impact evaluation criteria as a guide, assign an impact value (high, medium, or low) to each active threat.

Phase 3  
Process S4  
Activity S4.3

**Step 24** Using the probability evaluation criteria as a guide, assign a probability value (high, medium, or low) to each active threat. Document your confidence level in your probability estimate.

Phase 3  
Process S5  
Activity S5.2

**Step 26** Transfer the stoplight status for each security practice area from the *Security Practices worksheet* to the “Security Practice Areas” section (Step 26) of the following worksheet.

**Step 27** Select a mitigation approach (mitigate, defer, accept) for each active risk.  
For each risk that you decided to mitigate, circle one or more security practice areas for which you intend to implement mitigation activities.

Physical Configuration Problems

## 7 Network Access Paths Worksheet

Phase 2  
Process S3  
Activity S3.1

<b>Step 17</b>	Select the system of interest for each critical asset (i.e., the system most closely related to the critical asset).
<b>Step 18a</b>	Review paths used to access each critical asset, and select key classes of components related to each critical asset.  Determine which classes of components are part of the system of interest.
<b>Step 18b</b>	Determine which classes of components serve as intermediate access points (i.e., which components are used to transmit information and applications from the system of interest to people).
<b>Step 18c</b>	Determine which classes of components, both internal and external to the organization's networks, are used by people (e.g., users, attackers) to access the system.
<b>Step 18d</b>	Determine where information from the system of interest is stored for backup purposes.
<b>Step 18e</b>	Determine which other systems access information or applications from the system of interest and which other classes of components can be used to access critical information or services from the system of interest.

Step 17

**System of Interest**

*What system or systems are most closely related to the critical asset?*

**Access Points**

System of Interest

Intermediate Access Points

Step 18a

**System of Interest**

*Which of the following classes of components are part of the system of interest?*

- Servers
- Internal Networks
- On-Site Workstations
- Others (list)

Step 18b

**Intermediate Access Points**

*Which of the following classes of components are used to transmit information and applications from the system of interest to people?*

*Which classes of components could serve as intermediate access points?*

- Internal Networks
- External Networks
- Others (list)

**Note:** When you select a key class of components, make sure that you also document any relevant subclasses or specific examples when appropriate.

## 8 Threat Translation Guide

Phase 1  
Process S2  
Activity S2.3

<b>Threat Translation Guide</b>	<p>The <i>Threat Translation Guide</i> describes each branch of an asset-based threat tree. If you have difficulty understanding the types of threats represented by a branch, you can use this guide to decipher the meaning of that branch.</p> <p>You will find asset-based threat trees for the following sources of threat:</p> <table><thead><tr><th>Source of Threat</th><th>Page</th></tr></thead><tbody><tr><td>Human actors using network access</td><td>60-63</td></tr><tr><td>Human actors using physical access</td><td>64-67</td></tr><tr><td>System problems</td><td>68-71</td></tr><tr><td>Other problems</td><td>72-77</td></tr></tbody></table>	Source of Threat	Page	Human actors using network access	60-63	Human actors using physical access	64-67	System problems	68-71	Other problems	72-77
Source of Threat	Page										
Human actors using network access	60-63										
Human actors using physical access	64-67										
System problems	68-71										
Other problems	72-77										

Description	Example
A staff member without malicious intent who has legitimate access to the computing infrastructure accidentally views confidential information on an important system.	Incorrect file permissions enable a staff member to accidentally access a restricted personnel database.
A staff member without malicious intent who has legitimate access to the computing infrastructure accidentally modifies information on an important system.	A staff member accidentally enters incorrect financial data into a customer database.
A staff member without malicious intent who has legitimate access to the computing infrastructure accidentally loses or destroys information on an important system.	A staff member deletes an important customer file by mistake.
A staff member without malicious intent who has legitimate access to the computing infrastructure accidentally interrupts access to an important system.	A staff member who is not computer savvy inadvertently crashes an important system.
A staff member with malicious intent who has legitimate access to the computing infrastructure exploits that access to deliberately view confidential information on an important system.	A staff member uses access to a restricted personnel database to deliberately view information in that database that is restricted by policy.
A staff member with malicious intent who has legitimate access to the computing infrastructure exploits that access to deliberately modify information on an important system.	A staff member responsible for data entry deliberately enters incorrect customer information into a database.
A staff member with malicious intent who has legitimate access to the computing infrastructure exploits that access to deliberately lose or destroy information on an important system.	A staff member with access to design documents for a new product deliberately deletes the files that contain those design documents.
A staff member with malicious intent who has legitimate access to the computing infrastructure exploits that access to deliberately interrupt access to an important system.	A staff member uses legitimate access to the computing infrastructure to launch a denial-of-service attack on an important system.

Description	Example
An outsider without malicious intent gains access to your computing infrastructure (legitimately or by accident) and views confidential data on a system.	Temporary employees are given access to your computing infrastructure to help with an increased workload. While performing their job duties, one of them accidentally views confidential personnel data.
An outsider without malicious intent gains access to your computing infrastructure (legitimately or by accident) and accidentally modifies information on a system.	Temporary employees are given access to your computing infrastructure to help with an increased workload. While performing their job duties, one of them accidentally modifies important customer data.
An outsider without malicious intent gains access to your computing infrastructure (legitimately or by accident) and loses or destroys information on a system.	Temporary employees are given access to your computing infrastructure to help with an increased workload. While performing their job duties, one of them accidentally loses or destroys financial data.
An outsider without malicious intent gains access to your computing infrastructure (legitimately or by accident) and accidentally interrupts access to a system.	Temporary employees are given access to your computing infrastructure to help with an increased workload. While performing their job duties, one of them accidentally crashes an important system.
An attacker with malicious intent deliberately exploits vulnerabilities in the computing infrastructure to view confidential information.	A corporate spy exploits vulnerabilities in the computing infrastructure to gain unauthorized access to a key business system. The spy uses that access to view confidential customer information on the system.
An attacker with malicious intent deliberately exploits vulnerabilities in the computing infrastructure to modify information.	A corporate spy exploits vulnerabilities in the computing infrastructure to gain unauthorized access to a key business system. The spy uses that access to modify financial data on the system.
An attacker with malicious intent deliberately exploits vulnerabilities in the computing infrastructure to lose or destroy information.	A corporate spy exploits vulnerabilities in the computing infrastructure to gain unauthorized access to a key business system. The spy uses that access to lose or destroy a new product design on the system.
An attacker with malicious intent deliberately exploits vulnerabilities in the computing infrastructure to interrupt access to a system.	A corporate spy exploits vulnerabilities in the computing infrastructure to gain unauthorized access to an airline's scheduling system. The spy uses that access to crash the system and prevent real-time updates.

Description	Example
A staff member without malicious intent accidentally views confidential information after gaining physical access to a system, one of its components, or a physical copy of the information.	A staff member accidentally sees confidential information on (1) a colleague's computer screen or (2) a printout on a colleague's desk.
A staff member without malicious intent accidentally modifies information after gaining physical access to a system, one of its components, or a physical copy of the information.	A staff member modifies information by (1) accidentally altering information on a colleague's computer while using it for another purpose or (2) accidentally taking a page of a printout on a colleague's desk.
A staff member without malicious intent accidentally loses or destroys information after gaining physical access to a system, one of its components, or a physical copy of the information.	A staff member loses or destroys information by (1) accidentally deleting information from a colleague's computer while using it or (2) shredding a paper accidentally taken from a colleague's desk.
A staff member without malicious intent interrupts access to a system or information by accidentally using physical access to a system, one of its components, or a physical copy of the information to prevent others from accessing the system or information.	A staff member interrupts access to a system by (1) accidentally crashing the system while accessing it from a colleague's computer or (2) locking the keys inside an office where a physical file is stored.
A staff member with malicious intent deliberately views confidential information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A staff member uses unauthorized access to a physically restricted area of the building to deliberately (1) view confidential information on a computer or (2) read a confidential memo lying on a desk.
A staff member with malicious intent deliberately modifies information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A staff member uses unauthorized access to a physically restricted area of the building to deliberately (1) modify information on a computer or (2) modify a physical file lying on a desk.
A staff member with malicious intent deliberately loses or destroys information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A staff member uses unauthorized access to a physically restricted area of the building to deliberately (1) delete information on a computer or (2) destroy a physical file lying on a desk.
A staff member with malicious intent deliberately interrupts access to an important system or information by breeching physical security to a system, one of its components, or a physical copy of the information and using that physical access to prevent others from accessing the system or information.	A staff member uses unauthorized access to a physically restricted area of the building to (1) gain access to and then deliberately crash an important business system or (2) jam the door and prevent others from physically accessing the systems and information located in that area of the building.

Description	Example
An outsider without malicious intent gains physical access to your computing infrastructure or a physical copy of information and uses that access to view confidential information accidentally.	A consultant is given access to a staff member's office and accidentally sees confidential information on (1) a staff member's computer screen or (2) a printout on a staff member's desk.
An outsider without malicious intent gains physical access to your computing infrastructure or a physical copy of information and uses that access to modify information accidentally.	A consultant is given access to the computer room and (1) accidentally makes the wrong change to a configuration file on a server or (2) accidentally records the wrong information in a maintenance log.
An outsider without malicious intent gains physical access to your computing infrastructure or a physical copy of information and uses that access to lose or destroy information accidentally.	A consultant configuring one of your servers is given access to the computer room and accidentally (1) destroys an important electronic file or (2) throws away an important piece of system documentation.
An outsider without malicious intent gains physical access to your computing infrastructure or a physical copy of information and uses that access to accidentally prevent others from accessing the information.	A consultant configuring one of your servers is given access to the computer room and accidentally (1) crashes a system while accessing it or (2) locks the keys to the computer room inside it after he or she leaves.
An attacker with malicious intent deliberately views confidential information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A corporate spy poses as a member of the cleaning crew to gain unauthorized physical access to a competitor's site and view confidential information either (1) on a key business system or (2) in a physical file.
An attacker with malicious intent deliberately modifies information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A corporate spy poses as a member of the cleaning crew to gain unauthorized physical access to a competitor's site and modify financial information either (1) on a key business system or (2) in a physical file.
An attacker with malicious intent deliberately loses or destroys information by breeching physical security and accessing components of the computing infrastructure or a physical copy of the information.	A corporate spy poses as a member of the cleaning crew to gain unauthorized physical access to a competitor's site and destroy customer information either (1) on a key business system or (2) in a physical file.
An attacker with malicious intent deliberately interrupts access to an important system or information by breeching physical security to a system, one of its components, or a physical copy of the information and by using that physical access to prevent others from accessing the system or information.	A corporate spy poses as a member of the cleaning crew to gain unauthorized physical access to a competitor's site and (1) deliberately crashes an important business system or (2) jams the door to prevent others from physically accessing the systems and information located in an area of the building.

System Problems		
Asset	Actor	Outcome
		disclosure
	software defects	modification
		loss, destruction
		interruption
		disclosure
	system crashes	modification
		loss, destruction
		interruption

\* Blank lines indicate unusual or extremely rare possibilities.

Description	Example*
A software defect results in disclosure of information to unauthorized parties.	A defect in a computer's operating system changes file access permissions to permit world read and write permissions on certain files and directories.
A software defect results in modification of information on a system.	A custom software application incorrectly performs mathematical operations on data, affecting the integrity of the results.
A software defect results in the loss or destruction of information on a system.	A word processing application is known to crash computers periodically because of a problem with a specific command sequence, destroying any information that was not saved.
A software defect results in a system crash, preventing access to the system.	A word processing application is known to crash computers periodically because of a problem with a specific command sequence, preventing access to that computer.
A system crashes for unknown reasons (i.e., it cannot be traced to a software defect, hardware defect, malicious code, or actions by people), resulting in disclosure of information to unauthorized parties.	---
A system crashes for unknown reasons (i.e., it cannot be traced to a software defect, hardware defect, malicious code, or actions by people), resulting in modification of information on that system.	A system crashes during a lengthy update of a financial database, corrupting the information in the database.
A system crashes for unknown reasons (i.e., it cannot be traced to a software defect, hardware defect, malicious code, or actions by people), resulting in the loss or destruction of information on that system.	A customer database system frequently crashes, destroying any information that was not saved at the time of the crash.
A system crashes for unknown reasons (i.e., it cannot be traced to a software defect, hardware defect, malicious code, or actions by people), resulting in interruption of access to that system.	An email server crashes, resulting in interruption of user access to email.

\* Blank lines indicate unusual or extremely rare possibilities.

Description	Example*
A hardware defect results in disclosure of information to unauthorized parties.	---
A hardware defect results in modification of information on a system.	A disk drive develops a hardware problem that affects the integrity of a database that is stored on the disk.
A hardware defect results in the loss or destruction of information on a system.	A disk drive develops a hardware problem that ends up destroying the information on the disk. Files can be retrieved only from backups.
A hardware defect results in a system crash, preventing access to the system.	A disk drive develops a hardware problem, preventing access to any information on the disk until the problem is corrected.
A system is affected by malicious code (virus, worm, Trojan horse, back door) that enables unauthorized parties to view information.	A back door on a system enables unauthorized people to access the system and view customer credit card information on that system.
A system is affected by malicious code (virus, worm, Trojan horse, back door) that modifies information on that system.	A system is infected with a virus that modifies a process control application on the computer's disk drive.
A system is affected by malicious code (virus, worm, Trojan horse, back door) that deletes information on that system.	A system is infected with a virus that deletes all information on the computer's disk drive.
A system is affected by malicious code (virus, worm, Trojan horse, back door) that results in the system crashing.	A system is infected with a virus that is spread via email, slowing network traffic and creating a denial-of-services attack.

Other Problems		
Asset	Actor	Outcome
		disclosure
	power supply problems	modification
		loss, destruction
		interruption
		disclosure
	telecommunications problems or unavailability	modification
		loss, destruction
		interruption

\* Blank lines indicate unusual or extremely rare possibilities.

Description	Example*
Problems with the power supply lead to disclosure of information to unauthorized parties.	---
Problems with the power supply lead to modification of information on a system.	---
Problems with the power supply lead to loss or destruction of information on a system.	A power outage results in loss of any information that was not saved at the time of the outage.
Problems with the power supply lead to interruption of access to a system.	A power outage prevents access to all key business systems.
Unavailability of telecommunications services leads to disclosure of information to unauthorized parties.	---
Unavailability of telecommunications services leads to modification of information on a system.	---
Unavailability of telecommunications services leads to loss or destruction of information on a system.	---
Unavailability of telecommunications services leads to interruption of access to a system.	The unavailability of the telecommunications link prevents access to a key business system located at a remote site.

Other Problems		
Asset	Actor	Outcome
		disclosure
	third-party problems or unavailability of third-party systems	modification
		loss, destruction
		interruption
		disclosure
	natural disasters (e.g., flood, fire, tornado)	modification
		loss, destruction
		interruption

\* Blank lines indicate unusual or extremely rare possibilities.

Description	Example*
Problems with services provided by third parties (e.g., maintenance of systems) lead to disclosure of information to unauthorized parties.	A staff member from a third-party service provider views confidential information on a key business system that is maintained by that service provider.
Problems with services provided by third parties (e.g., maintenance of systems) lead to modification of information on a system.	Problems at a third-party service provider lead to the modification of information on a key business system located at that provider's site and maintained by the provider.
Problems with services provided by third parties (e.g., maintenance of systems) lead to loss or destruction of information on a system.	Problems at a third-party service provider lead to the destruction of information on a key business system located at that provider's site and maintained by the provider.
Problems with services provided by third parties (e.g., maintenance of systems) lead to interruption of access to a system.	A system maintained by a third-party service provider and located at the provider's site is unavailable due to problems created by that provider's staff.
Natural disasters (e.g., flood, fire, tornado) lead to disclosure of information to unauthorized parties.	People at the site of a tornado see confidential memos that are dispersed among the debris.
Natural disasters (e.g., flood, fire, tornado) lead to modification of information.	---
Natural disasters (e.g., flood, fire, tornado) lead to loss or destruction of information.	The flooding of a basement area destroys paper records that are stored there.
Natural disasters (e.g., flood, fire, tornado) lead to interruption of access to a system.	The flooding of a computer room in the basement of a building prevents access to systems in that room.

Other Problems (cont.)		
Asset	Actor	Outcome
		disclosure
	physical configuration or arrangement of buildings, offices, or equipment	modification
		loss, destruction
		interruption
		disclosure
		modification
		loss, destruction
		interruption

\* Blank lines indicate unusual or extremely rare possibilities.

Description	Example*
The physical configuration or arrangement of buildings, offices, or equipment leads to disclosure of information to unauthorized parties.	The layout of an office workspace enables anyone in the area to view customer credit card information displayed on computer screens.
The physical configuration or arrangement of buildings, offices, or equipment leads to modification of information on a system.	---
The physical configuration or arrangement of buildings, offices, or equipment leads to loss or destruction of information on a system.	---
The physical configuration or arrangement of buildings, offices, or equipment leads to interruption of access to a system.	---

13. ABSTRACT (MAXIMUM 200 WORDS) The Operationally Critical Threat, Asset, and Vulnerability Evaluation <sup>SM</sup> (OCTAVE <sup>®</sup> ) approach defines a risk-based strategic assessment and planning technique for security. OCTAVE is a self-directed approach, meaning that people from an organization assume responsibility for setting the organization's security strategy. OCTAVE-S is a variation of the approach tailored to the limited means and unique constraints typically found in small organizations (less than 100 people). OCTAVE-S is led by a small, interdisciplinary team (three to five people) of an organization's personnel who gather and analyze information, producing a protection strategy and mitigation plans based on the organization's unique operational security risks. To conduct OCTAVE-S effectively, the team must have broad knowledge of the organization's business and security processes, so it will be able to conduct all activities by itself.
